

CLARINESS

CASE STUDY

# Post-Traumatic Stress Disorder (PTSD)

**Highlights:**

- We received over 3K website visitors to the dedicated study page
- We produced 300 referrals
- 65% of all study participants came from our patient portal, ClinLife®

## CASE STUDY

### PTSD

**65% of PTSD  
study participants  
delivered  
via ClinLife®**

#### Overview:

- > We assisted Boehringer Ingelheim with their Post-Traumatic Stress Disorder (PTSD) study across four sites in Germany via our online portal, ClinLife®

#### Our approach:

- > Over a 12-month period, ClinLife® generated >3,000 organic study page visits, 323 pre-qualified referrals, and delivered 19/29 study participants
- > ClinLife®, was the sole digital recruitment channel used for this study in Germany and ensured that the study reached the randomization goal within a short period of time

#### Challenges:

- > Patients need more information to determine if a study will truly help them
- > Patients and those around them tend not to recognize common symptoms of PTSD

“The ClinLife® portal emerged as a digital supporter for pre-qualified patient referrals, driving 65% of randomizations for our study. Its performance enabled us to offer treatment to a greater number of patients with PTSD at an accelerated pace.”

Global Clinical Development & Operations

#### Our results:

✓ **3K+**  
Organic study  
page visits

✓ **300**  
Referrals & 43  
screened patients

✓ **19**  
Participants (65%  
of total study target)
